

Picture:

Horizontal plane
is subspace spanned
by $|v_1\rangle, \dots, |v_k\rangle$ and
by $|v_1\rangle, \dots, |v_k\rangle$

$$\sum_{i=1}^k |v_i\rangle \langle v_i | w_{k+1} \rangle = \left(\begin{array}{l} \text{Component of} \\ |w_{k+1}\rangle \text{ in subspace} \\ \text{spanned by} \\ |v_1\rangle, \dots, |v_k\rangle \end{array} \right)$$

$$|w_{k+1}\rangle - \sum_{i=1}^k |v_i\rangle \langle v_i | w_{k+1} \rangle = \left(\begin{array}{l} \text{Component of } |w_{k+1}\rangle \\ \text{orthogonal to subspace} \\ \text{spanned by } |v_1\rangle, \dots, |v_k\rangle \end{array} \right)$$

Normalize this to get $|v_{k+1}\rangle$

$$|v_{k+1}\rangle = \frac{|w_{k+1}\rangle - \sum_{i=1}^k |v_i\rangle \langle v_i | w_{k+1} \rangle}{\left\| |w_{k+1}\rangle - \sum_{i=1}^k |v_i\rangle \langle v_i | w_{k+1} \rangle \right\|}$$

$$= \left[\langle w_{k+1} | w_{k+1} \rangle - \sum_{i=1}^k \langle w_{k+1} | v_i \rangle \langle v_i | w_{k+1} \rangle - \sum_{i=1}^k \langle w_{k+1} | v_i \rangle \langle v_i | w_{k+1} \rangle + \sum_{i,j=1}^k \langle w_{k+1} | v_i \rangle \langle v_i | v_j \rangle \langle v_j | w_{k+1} \rangle \right]$$

$$\begin{aligned}
 & \downarrow \\
 & = \left[\langle w_{k+1} | w_{k+1} \rangle - \sum_{i=1}^k |\langle w_{k+1} | v_i \rangle|^2 \right]^{1/2} \\
 & = \left[\langle w_{k+1} | \left(1 - \sum_{i=1}^k |v_i\rangle\langle v_i| \right) | w_{k+1} \rangle \right]^{1/2}
 \end{aligned}$$

Algebra: It is clear that the states $|v_i\rangle$ are normalized, so all we need to show is that each state is \perp to the previous states in the list. Inductively, we assume $\langle v_i | v_j \rangle = \delta_{ij}$, $i, j \leq k$, and we show $\langle v_i | v_{k+1} \rangle = 0$ for $i \leq k$.

$$\begin{aligned}
 & \langle v_i | v_{k+1} \rangle = \frac{\langle v_i | w_{k+1} \rangle - \sum_{j=1}^k \overbrace{\langle v_i | v_j \rangle}^{\delta_{ij}} \langle v_j | w_{k+1} \rangle}{\| \quad \|} \\
 & = \frac{\langle v_i | w_{k+1} \rangle - \langle v_i | w_{k+1} \rangle}{\| \quad \|} \\
 & = 0.
 \end{aligned}$$
